No. 41.

ANNUAL REPORT

OF THE

PUBLIC PRINTER

FOR THE

FISCAL YEAR ENDING JUNE 30, 1888.

JANUARY 16, 1889.—Presented by the President pro tempore, referred to the Committee on Printing, and ordered to be printed.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1889.

CONTENTS.

Page.
1-12

REPORT OF THE PUBLIC PRINTER.....

APPENDICES.

Exhibits:

I. Financial statement of appropriations.....	13-17
II. Total number of pounds of printing and writing papers issued by the paper wareroom to the press-rooms for the period of six months during the years 1885, 1887, and 1888	17
III. Total number of requisitions received from the Departments and Bureaus of Government (not including Congressional work) July 1 to December 31, inclusive, for the years 1885 and 1888.....	18
IV. Statement showing increase in number of pages and copies of printed matter executed and delivered to Congress during the fiscal years 1885 and 1888	18
V. Total number of volumes of bound work delivered to Congress from the bindery for the calendar years of 1885 and 1888.....	18
VI. Statement of output of press-room of main office, in printed forms and tokens, for a period of six months during the years of 1885 and 1888.	18
VII. Comparative statement of expenditures for labor, material, paper, and lithographing and engraving, by fiscal years.....	19

TABULAR STATEMENTS.

Receipts for sales of documents, waste-paper, gold sweepings, etc., for fiscal years 1885, 1886, 1887, and 1888	19
Disbursements for Office of Public Printer.....	19
Disbursements for printing presses, machinery, tools, implements, etc.....	20
Disbursements for paper for public printing.....	21, 22
Disbursements for printing material other than paper for printing.....	22
Disbursements for stereotyping machinery, implements, and material.....	23
Disbursements for material, supplies, etc.....	24-27
Disbursements for alterations, improvements, and repairs to buildings.....	28
Disbursements for miscellaneous materials.....	29-33
Disbursements for lithographing and engraving.....	34-40
Congressional Record, distribution of.....	42
Congressional Record, statement of expenditures, from first year of publication	43
Estimated cost of printing documents	44-53
Allotments for Executive and Judicial Departments	54
List of contracts for paper	55-57
List of contracts for lithographing and engraving.....	58, 59
List of contracts for material and supplies.....	60-71
List of hands and time employed during fiscal year	72-89

ANNUAL REPORT
OF
THE PUBLIC PRINTER.

GOVERNMENT PRINTING OFFICE,
Washington, D. C., January 16, 1889.

SIR: I have the honor herewith to transmit to Congress the annual report of the condition and operations of this office for the fiscal year of 1888.

Very respectfully,

TH. E. BENEDICT,
Public Printer.

HON. J. J. INGALLS,
President of the Senate pro tempore.

In presenting to Congress, as required by statute, the usual specific information in regard to the operations of the Government Printing Office for the fiscal year closing June 30, 1888, I have deemed it proper to add thereto such comparative statements, including exhibits covering a portion of the present fiscal year, as are necessary to throw as clear a light as possible upon the present condition of the public printing and its rapid growth during the past four years.

These statements and exhibits show the expenditures of all moneys; give full information in regard to all contracts, whether made by the Joint Committee on Printing of Congress or the Public Printer; exhibit in detail all purchases made outside of contracts; and present to Congress all the information necessary to make clear certain facts of the highest value in their bearing upon the administration of the office and the work it has accomplished. This information is certainly of interest, and it is proper that it should be presented to Congress at a time when public attention is so largely directed to the conduct of the public printing. I am specially desirous that the fullest scrutiny should be given to the actual results that have been achieved, and I would call attention to the fact that the exhibits made are based solely upon reports and statements prepared in

the regular routine of duty by the experienced and capable foremen and clerical force of the office, and now a part of its official records.

The conditions surrounding the execution of the public printing have in recent years been of a somewhat extraordinary character. The remarkable growth and marked improvement in the character of the work of this office have been accompanied by no increase of appropriation or of the public expense; in fact, the rather remarkable spectacle is exhibited of a decrease of appropriation being signalized by so great an increase of work as to appear almost incredible when it is considered that a corresponding increase in the character of the work and the quality of material used has also been exhibited. I am clearly of the opinion that the work accomplished by this office has not been adequately appreciated either by the public at large or by the legislative and executive branches of the Government, with which it is so intimately connected. It may also be said, with strict justice, that the importance of the public printing in its relation to the administration of the Federal service has never yet been clearly understood.

Such a condition should no longer prevail. This is the age of the printing-press. The magnificent development of modern printing, which has been so largely the result of American genius and enterprise, deserves due recognition at the hands of a Government which should be thoroughly representative of American progress. It is easy to fall into the opinion that the public printing is a small matter, and that the cheap, though not economical, methods of the past are all that are necessary. I am of the opinion that the ends of economy, as well as the highest interests of the public service in all its varied relations to the progress of science and the diffusion of intelligence, will be best subserved by making the Government Printing Office a workshop which every intelligent printer, and every citizen as well, may visit with pride, and which shall be thoroughly representative of the best American skill and progress in the "art preservative of arts."

It is not merely fanciful to trace the foundation and growth of the Government Printing Office to the practical necessities arising out of the Government of a people instructed and influenced by a free and public-spirited press, and demanding the fullest knowledge in regard to public affairs. The utility of a printing department in connection with our form of Government, as an adequate and ever-ready instrument for publishing the proceedings, debates, and laws of Congress, the reports of the Federal Departments and Bureaus, the papers of scientific institutions, commissions, and expeditions fostered by the Government, and for meeting the vast and ever-growing practical demands of the public service in its relations to the business affairs and information of the people, can not be doubted. The idea of such a department received early recognition in the his-

tory of the Republic. Step by step it has assumed form, first as a merely convenient adjunct to Congress, and later as an independent mechanical plant for doing the work of the Government printing. Year after year, with occasional temporary set-backs, it has grown in importance and in the value of its services. Every administration has added to its facilities; Congress has gradually fostered it; and to-day, inadequate as it is, it is still undoubtedly the largest printing-house extant, and the publications bearing its imprint represent every department and operation of the public service, and command attention throughout the civilized world.

The advantages of a proper concentration of the work of public printing are plainly apparent. The necessities of the Government in relation to the communication of information to the people are so large, and the value of promptness and of special facilities and machinery is so great, that the execution of the public printing by private contracts, subject to frequent changes, would result in much confusion, lack of uniformity, and in the long run in largely enhanced cost. The tendency has been, and still is, toward the creation of a distinctively Government press—a great publication bureau, which shall supply the public printing and documents provided for by Congress as readily as the great private printing-houses of the country meet the similar wants of the general public. Such a press, properly organized, thoroughly equipped, and honestly and efficiently conducted, would prove of inestimable value to the Government and people; in fact, it is to-day and must remain a genuine public necessity.

To fully meet the necessities for which it was created, the Government Printing Office should be made and kept fully adequate to the prompt execution of any legal and proper demands that may be made upon it. This it has not been in the past; and its present deficiencies are plainly apparent to all who are in a position to clearly understand them. The attention of Congress was fully called to this subject in my last annual report, and information of special interest presented in subreports of the foremen and assistants in charge of the working divisions of the office.

I take pleasure, however, in saying that the office during the past fiscal year has attained so complete an organization as to be adequate to the current work before it, and it has not at any time in late years been more fully abreast of that work.

The advance made has been so marked, as shown by the reports from every division of the office, that it would be easy, and perhaps personally agreeable to me, to assume that the ends of a proper reform have been achieved. I am far from believing, however, that the office as at present equipped meets the highest standard of efficiency that is desirable.

While it has considerable good machinery, the great bulk of its

plant is old, much worn, and entirely inadequate to the service demanded of it. The necessity for accomplishing large and hurried results within a limited working space lowers the character of work, discredits the skill of the many capable foremen, superintendents, and mechanics, while it obstructs nearly every effort to improve the standard of public printing. This standard will never reach a proper level until Congress provides appropriations above the bare necessities of labor and material, and furnishes a building with working space sufficient to allow the handling of the work legally required to be done without a sacrifice of many conveniences necessary to the best results.

The improvements begun and carried on during the past two years have been directed to a thorough reform of the general business methods and conveniences of the office, to the end that, with the present plant and buildings, the office might keep abreast of the urgent current work demanded of it. To do this, or even to make a step in doing it, involved a problem that can only be appreciated by those familiar with the fact that the office had been for some time unequal even to the execution of the current work, which had accumulated to such an extent as to practically block some of its most important divisions.

So far as a remedy has been applied, it has been very largely in the better organization of the office, through the introduction of methods employed in the best private printing-houses of the country, in adding certain modern facilities, and in the employment of the best supervision and the most skilled and industrious labor in the execution of the work. I have made it a point to study the most recent progress of the printing art, as exemplified by the recognized masters of the trade; and I take pleasure in saying that I have been afforded the fullest opportunity to gain information regarding the organization and methods of the great printing-houses of our principal Eastern cities. The establishments of Harper & Brothers, the De Vinne Press, J. J. Little & Co., the Riverside and University Presses, and several other printing, binding, and electrotyping houses of almost equal note in New York, Boston, and Philadelphia, have cordially received the representatives of this office, and have afforded them every facility to gain any information desired.

The information thus obtained, together with the suggestions of the experienced assistants in charge of the mechanical and clerical work of the office, was subjected to careful analysis, and has been applied in many directions with the specific object of obtaining an increased amount of finished work, and of reducing waste, loss of time, and needless labor, and of bettering the surroundings and accommodations of the employes. The results achieved are in a measure clearly shown in the statistical information hereto appended.

These exhibits clearly indicate that during the present and the past

fiscal year there has been a most remarkable increase in consumption of material as compared with a like period three years ago, and that the output of completed work for the past fiscal year is the heaviest ever presented in any report to Congress of the result of a single year's operations of the office.

Exhibit II shows an increase of upwards of 12 per cent. in the amount of printing and writing papers consumed during a period of six months of the fiscal year of 1888 over a similar period of 1886. It also indicates an increase of over 67 per cent. for the same period of the present fiscal year of 1889 over a similar period of 1888 in the use of the same class of papers; which constitute the bulk of paper used by the office. This exhibit does not include any ledger papers consumed during the period named, some 200 tons of which were used during the calendar year of 1888; nor does it include any stationery, envelopes, or wrapping paper furnished by Congress or the Departments to the office for printing, of which many tons are supplied yearly; the office having printed for Congress alone during the first session of the Fiftieth Congress 22,515,890 envelopes.

Exhibit III shows an increase of over 24 per cent. in the number of Department requisitions for executive work for a period of six months of 1888 over a like period three years ago. In addition to the increase in the number of requisitions, it is proper to state that there has also been a large increase in the amount of printing asked for upon each requisition over the amounts required three years ago, which increase is estimated to be fully one-third.

Exhibit IV shows an increase of over 58 per cent. in printed pages and over 84 per cent. in printed copies of work delivered to Congress during the fiscal year 1888 over the amount of same delivered during 1885.

Exhibit V shows an increase of over 14 per cent. in the number of bound volumes delivered to Congress by the bindery during the calendar year 1888 over that of 1885. There was delivered to Congress from the bindery from July 1 to December 31, 1888, inclusive, 819,608 bound volumes.

Exhibit VI shows an increase of work in the press-room of the main office of over 16 per cent. in printed forms and over 53 per cent. in printed tokens during a period of six months of 1888 over a like period of 1885. This large increase in printed work is also exhibited in the work of the Department branch divisions of the office. The 53 per cent. increase in printed tokens does not show the entire increase of printed pages, for the reason that many presses which in 1888 used paper printing thirty-two octavo book pages in 1885 used paper printing only sixteen octavo book pages.

During the past session of Congress the office completed and delivered to that body several volumes of the bound edition of the Congressional Record prior to the close of the session. This was the

first time in its history that such an early delivery of this work was accomplished, and nearly the full edition of ten bound volumes was delivered to Congress within two months after adjournment.

The edition of the United States Statutes of the last Congress was printed and delivered at an earlier period after adjournment than in any previous instance, notwithstanding it was the largest volume ever issued.

The Agricultural Report of 1887, comprising an edition of 402,000 copies, was printed, folded, gathered, and delivered to the bindery, and all the edition bound and delivered to Congress excepting 30,000 copies, within a period of seven months after it went to press in June. In connection with the speedy completion of this and other current Congressional and executive work, it may be stated that the office has made a decided gain on the large accumulation of delayed work of other years, extending as far back as the Forty-sixth Congress.

There have been bound and delivered to Congress within the past two years 157,890 volumes of "reserve" work of the Forty-sixth, Forty-seventh, Forty-eighth, and Forty-ninth Congresses, and 406,755 volumes of other Congressional work; all of which was printed and much of it folded and gathered prior to my taking charge of the office.

The office is gradually gaining on all work ordered prior to the first session of the present Congress; and, were it not for the want of sufficient funds to purchase material and employ labor, it is safe to say that all back work, as far as copy has been furnished for the same, would be printed and ready for the bindery during the present calendar year.

There was delivered to Congress during the past year the largest amount of completed work ever sent out from this office during a similar period of time, costing \$1,075,586.06. It is worthy of notice that, in consequence of this large delivery, the document-rooms of the two houses have found, with their present facilities, great difficulty at times in receiving this work, and there would appear to be a necessity for additional facilities for receiving and storing such work by Congress.

The average consumption of material of all kinds, including paper, binders' boards, leather, and cloth, now closely approximates 20 tons daily. Under contracts which show no material change in prices, the cost of paper consumed in 1888, for a period of six months, increased over a similar period of 1887 from \$23,955.34 per month to \$38,475.83 per month. The cost of binding material, under contracts representing practically the same average prices, increased from \$21,419.22 per month to \$23,414.62 per month for a similar period. This increase is fully sustained in the exhibits of tokens printed and work delivered to Congress and the Departments; the increase

being fully 50 per cent. during a period of three years. It is important to note that these results are not the effect of increased appropriations since 1885 (see Exhibit VII), nor of enlarged mechanical facilities, nor have they involved any decrease in the average compensation of the employés of the office. The financial resources of the office have been actually smaller than during several preceding years up to 1887; the working force has been considerably reduced; while the earnings of employés have been increased in several divisions and the average of wages has been higher; a larger percentage of the total expenses of the office being paid in wages to the employés.

I think I may justly claim that the work of the Government Printing Office, as at present conducted, represents the maximum of output at the minimum cost possible under existing appropriations and contract prices and with the present buildings and plant. As a rule, the best obtainable skill has been employed in all divisions of the office. Idleness, inefficiency, and waste, either of labor or material, have been abrogated as far as strict discipline and the most thorough watchfulness would permit.

Every dollar of appropriation for public printing and binding (see Exhibit I) for the past year was expended for labor and material, and had a larger appropriation been afforded more work would have been executed and a greater gain made on the delayed work of other years.

The largely-increased volume of current work, both executive and Congressional, required of the office at the present time is significant of the actual needs of the Government in the matter of public printing.

Experience has clearly shown that the demands upon the office increase with the increase of facilities, indicating that the Departments have been denied necessary work in the past and have been compelled to resort to various inconvenient and costly make-shifts in the conduct of their business. Indeed, the adoption of the latest and best business methods in connection with the management of the various Departments of the Government has necessitated the use of many new blank forms and books, to their great advantage in efficiency and economy.

The public printing is also increased year by year by the creation of new bureaus, commissions, and adjuncts of the public service by acts of Congress. This growth must naturally go on; for, as the country increases in wealth and population, the Government printing must increase with it.

Larger appropriations are absolutely demanded to meet this inevitable growth of the public printing. It is a mechanical impossibility for the office to further increase its daily average of work under the present rate of appropriations and with the present facilities and

space. The limit of capacity has been reached in the folding and binding divisions, and each is entirely unequal, with the present floor space, to the task of handling the full amount of work which is daily sent up from the press-room. The folding-room is so much embarrassed for want of working space and storage room, that it is necessary to transport daily many tons of printed matter to storage-rooms half a mile distant, and to handle the same with trucks and elevators, merely as a temporary expedient for relief, while presses have daily stood idle in the press-room, with work awaiting them, simply through the inability of other divisions of the office to handle their full product. The bindery is scarcely able to meet the current demand upon its facilities, while a large amount of delayed work of former years is still in arrears.

This condition of affairs has been called to the attention of Congress year after year, and it must now be said that the demand for additional space for certain divisions of the office has grown so imperative, that the remedy can not be longer postponed without still greater embarrassment of the public service. The exigency calls for the erection of a temporary building, with the utmost speed, adjoining the main office, until plans and means can be provided for the provision of a proper and capacious building.

I have not considered the subject of meeting the difficulties of the situation by a reduction of the volume of public printing, for the reason that a proper and business-like administration of the Federal Departments will make a greater rather than a less demand upon the office in the near future. All the indications point to an increased rather than a diminished amount of public printing. Estimates for printing, upon which important reforms are based, due to the late investigation into the business methods of the Departments by a committee of the United States Senate, have lately been called for, that involve large expenditures if adopted. I am satisfied that efficiency and business-like methods in administration will necessarily augment the public printing; and, when it is considered that much is now necessarily sacrificed to secure quantity rather than quality of work, owing to the inadequacy of the present facilities, I do not feel justified in withholding the actual facts of the situation.

Among the most noteworthy deficiencies may be mentioned the paper warehouse. Its condition is especially worthy of attention. This division suffers seriously for want of proper space, and the service of the office is embarrassed at times by the inability to carry a stock of paper sufficient to meet the large and hurried demands frequently made. At the time of the great blizzard, in March last, with its attendant interruption of transportation, the office nearly came to a stand-still through the exhaustion of the meager supply of paper which it is able to carry with its present storage capacity.

The lack of proper space in the office is also of great importance in connection with the health and comfort of the employés. In some of the divisions artificial lighting is required daily, and this, in summer, renders the heat intolerable, and the eye-sight and general health of many employés suffer in consequence. The near proximity of the office stables and those of adjoining property-owners, as well as the filthy condition of adjacent alleys and rows of tenements, add to the general unhealthiness of the office, due to the malarious neighborhood in which it is built, and calls, as a matter of humanity, for the early adoption of plans for the erection of a new and capacious building in another and more convenient locality for the purpose of the public printing.

The condition of the H street wing of the office, as to its capacity to carry the weight to which it is subjected in its present crowded condition, has been a source of daily anxiety during the past year, and I have frequently felt impelled to order the discontinuance of labor and the removal of work awaiting completion, in order to relieve the floor from the dangerous accumulation of weight upon it, which threatened the lives of the employés and the safety of the property under my charge.

The work of providing an additional new steam-boiler for heating purposes, and an additional engine for power, as provided for by the last appropriation bill, is going forward, and the office will soon be provided with ample facilities for heat and power.

The plans have been accepted for the erection of the additional story to the south center wing of the office for the use of the electrotyping and stereotyping division, and the same will be completed during the early spring. This will add greatly to the comfort and health of all the employés of the office, as it will remove from the lower floors the heat and noxious gases necessarily generated in said division.

The law extending thirty days' leave of absence each year with pay to all employés has resulted in increasing the office force to a percentage of about one-twelfth more than the number of employés that would otherwise be necessary. Notwithstanding this necessary increase and a more rigid enforcement of the eight-hour law, the present force is nearly one-tenth smaller, though Congress is in session, than it was at the beginning of my administration, at a time when Congress was not in session. I consider this force fully equal to all the work that can be accomplished under existing appropriations and conditions, and I have endeavored to keep it as nearly intact as possible during the past year and a half. But few discharges have been made during that period; and, owing to the late adjournment of the first session of the Fiftieth Congress, in October last, the office was spared the usual discharge that is rendered necessary at the close of a session in order to properly equalize the force, and

which must have reached many skillful and industrious persons of both sexes whose services I have been glad to retain.

In conclusion, I most cheerfully acknowledge my indebtedness to the foremen of printing and binding and their assistants, the chief book-keeper, and the clerical force and the employés of the office generally, for the intelligent and industrious efforts they have lent toward the results of the year's work as herewith exhibited.

TH. E. BENEDICT,
Public Printer.

APPENDICES.

EXHIBIT I.

Financial statement of the business of the Government Printing Office for the fiscal year ended June 30, 1888, and showing the condition of the appropriations July 1, 1888.

Contingent expenses, 1887:	
Balance unexpended July 1, 1887	\$75.28
Paid advertising bills	67.94
Balance July 1, 1888	7.34
Contingent expenses, 1888:	
Appropriation act March 3, 1887	3,000.00
Payments during fiscal year	1,687.08
Balance July 1, 1888	1,312.92
Printing and binding, 1886:	
Balance July 1, 1887	52,099.87
Paid employés	\$21.52
Paid lithographing and engraving	12,900.00
Balance July 1, 1888	12,921.52
Balance July 1, 1888	39,178.35
Printing and binding, 1887:	
Balance July 1, 1887	97,682.77
Received from sales of extra documents	11,479.52
Add amount charged February 1 and credited back December 5, 1887*	674.80
Paid employés	40,489.73
Paid lithographing and engraving	17,056.15
Paid paper for printing	15,839.22
Paid materials and supplies	31,404.99
Balance July 1, 1888	109,837.09
Balance July 1, 1888	104,790.09
Balance July 1, 1888	5,047.00
Printing and binding, 1887 (deficiency act February 1, 1888):	
Appropriation act February 1, 1888	10,000.00
Paid employés (25 per cent. additional to night force)	8,401.23
Balance July 1, 1888	1,598.77
Printing and binding, 1887 (deficiency act March 30, 1888):	
Appropriation act March 30, 1888	5,000.00
Paid employés (pro rata leave of absence)	4,944.00
Balance July 1, 1888	56.00
Printing and binding, 1888:	
Appropriation act March 3, 1887	2,122,000.00
Appropriation act March 30, 1888	108,000.00
Received from sales documents and for printing	115,615.69
Received from sales waste paper	23,820.58
Paid employés	1,588,184.28
Paid lithographing and engraving	31,867.62
Paid paper for printing	347,439.89
Paid materials and supplies	274,549.36
Balance July 1, 1888	2,369,436.27
Balance July 1, 1888	2,242,041.35
Balance July 1, 1888	127,394.92

* This amount was charged against this appropriation February 1, 1887, for printing-ink. A portion of the ink was returned to shippers and payment for balance suspended.

Financial statement of the business of the Government Printing Office for the fiscal year ended June 30, 1888, etc.—Continued.

Agricultural Report, 1885:

Balance July 1, 1887		\$84,783.24
----------------------------	--	-------------

Agricultural Report, 1886:

Balance July 1, 1887		169,696.98
Paid employés	\$90,660.54	
Paid lithographing and engraving	15,163.99	
Paid paper for printing	55,114.86	
Paid materials and supplies	8,736.70	
		<u>169,676.09</u>
